LOOK PERFECTLY MADE-UP ALL DAY WITH THE LATEST DEVELOPMENTS IN MICROPIGMENTATION

emi-permanent make-up is a nonsurgical treatment that simulates perfectly applied make-up through the delicate infusion of hypoallergenic mineral

pigments into the skin. The procedure, also known as micropigmentation, semipermanent make-up or cosmetic tattooing, improves facial features giving a hassle-free solution to looking great.

Sol Cosmedics is a specialist in the field of micropigmentation, and consultant Hina Solanki is renowned within the industry, and regularly featured in glossy magazines. Quality and flair are the hallmarks of Hina's work, and her level of expertise enables her to give clients the results they desire, whether they crave a dramatic look or a subtle one.

From straightforward beauty enhancement to more serious medical reconstruction or a simple scar camouflage, Hina's compassion and understanding of her clients' needs has brought accolades from the very top of the beauty industry. Her creativity and ability has captured the eye of the medical profession, leading cosmetic surgeons, and respected beauty magazines.

The most popular procedures are perfectly designed eyebrows, a beautiful lip blush, and eyeliner or eyelash enhancement. Over the past 10 years, semi-permanent cosmetics have dramatically improved. Clients no longer have to be satisfied with heavily blocked brows, thick eyeliners and unsightly lip lines, as the techniques, colour knowledge and pigments have advanced massively.

BEAUTIFUL BROWS

Short eyebrows can be lengthened, thin or sparse eyebrows can be given more fullness and a thicker shape, and asymmetrical eyebrows can be corrected. While an anti-ageing lift effect can be created to improve the appearance of straight or drooping eyebrows.

LUSCIOUS LIPS

This procedure can be used to perfect lip shape, define the natural lip line and enhance the natural lip colour giving a healthy appearance to the lips. It also has a remarkable antiageing effect on pale lips that have lost their colour and lip line sharpness due to the ageing process.

THE EYES HAVE IT

More people are discovering the advantages of permanent eyeliner not only because it enhances their appearance but also because it suits their lifestyle. Semi-permanent eye make-up never smears or rubs off the skin even through watery eyes, perspiration, sleep and the weather.

'Simple, quick and well worth it!' Ruth Middleton was tired of her sparse eyelashes and wanted a fuller look that also brought out the colour of her eyes for her wedding day. She turned to Hina at Sol Cosmedics for help.

'We chose the colour of the pigment together, then a topical anaesthetic was applied. Hina dotted the pigment through my eyelash line to give the appearance of thicker lashes.

'It felt a bit scratchy at first, but after five minutes I couldn't feel a thing. The whole process took about 40 minutes. When it was done, Hina gave me a healing balm to apply and guided me through the aftercare.'
